

IRONHACK · AI CONSULTING & INTEGRATION — FINAL PROJECT

Maison Lumière — “P2P”

AI-Assisted Accounts-Payable & Inventory Automation · Luxury Hospitality

“AI reads, humans decide.”

Thibaud Delaye

THE PROBLEM

A lean finance team, drowning in invoices

Cleo runs Maison Lumière. Her accountant spends 3 hours a day keying supplier invoices by hand.

≈ **33%**

Hotel margin — and falling

70–80%

Staff turnover / year

≈ **€12**

Per invoice, by hand

Cutting the team to save money backfires — it worsens the turnover. The lever is to make their time go further.

THE SOLUTION

AI reads each invoice; a human approves

An AI assistant captures, reads and codes every supplier invoice — and proposes the accounting entry for a person to approve.

Capability: document understanding (generative AI) + workflow automation

Nothing is posted, paid or sent without a person — “AI reads, humans decide.”

LIVE DEMO

See it run

- Drop an invoice → the entry appears
- The match flags the € overbilled before payment
- Draft the dispute · export the journal

p2p-inventory-production.up.railway.app · (backup recording ready)

≈ Breakeven in year 1 — on the AP scope alone

≈ €42k

Saved / year (AP scope)

Year 1

Breakeven incl. pilot

≈ €93.5k

Net / year — full tool

Full-tool value stack ≈ €106.5k/yr gross. Estimates on industry benchmarks — validated in the pilot.

Structural risks — already mitigated by design

Risk	L	I	Score	Mitigation
R1 · Accuracy on real invoice mix	3	4	12	Human reviews every entry; threshold routing; pilot backtest
R2 · Vendor PII → LLM / US services	3	4	12	DPA per vendor; EU-region processing; data minimisation
R5 · Automation bias (rubber-stamping)	3	4	12	Source shown; non-skippable review; spot-audits
R4 · Team distrust / change resistance	3	3	9	“Second set of eyes”; no headcount cuts; training
R8 · AI Act / GDPR misstep	2	4	8	Limited-risk + DPIA + technical file; EU region

Manageable — the human-in-the-loop neutralises accuracy risk, and creates the one to watch: automation bias.

Deployable compliantly — limited risk, GDPR-ready

EU AI Act

Limited risk / transparency

No decision about people → not high-risk.
AI-drafted e-mails → Article 50 disclosure.
No CE / registration.

GDPR — proceed w/ conditions

Vendor + staff data; basis: contract + legitimate interest.

Before real data: DPAs · EU-region transfers · retention · privacy notice.
Option: Mistral (EU) or Claude via EU cloud.

Compliant because: a human decides every entry, and personal data stays minimal and (in production) in-region.

STRATEGIC PLAN

POC → Pilot → Full → Scale

1 POC

working tool (now)

2 Pilot

10 wks · €20k · gate

3 Full

all vendors · e-invoicing

4 Scale

modules B/C · more hotels

Greenlight gate: touchless $\geq 65\%$ & accuracy $\geq 90\%$ at real volume.

Go-to-market. Sell direct (the pilot is the sale) → partners. ~€20k pilot + ~€13k/yr. A productised, EU-compliant vertical service for independent 5★ hotels.

The POC is already a working product

Not a mockup — a deployed app, real AI, graceful error handling.

- | | | |
|---|----------------------------------|--------------------------------------|
| 1 | Multi-source capture | e-mail + upload, dedup, PO grouping |
| 2 | Financial logic | GL coding · quantified 3-way match |
| 3 | Real outputs | balanced CSV journal · dispute PDF |
| 4 | Deployed & observable | Railway · persistent store · tracing |

RECOMMENDATION

Run a 10-week, ~€20k pilot

Real savings, low risk, deployable compliantly — proven on a falsifiable pilot, not a promise.

Thank you — questions?

Cleo, the next step is a 10-week pilot on your real invoices.
